

Cohort 3 - Group 22: The Wafflers

Eng1 Assessment 2

Requirements

Team Members:

[Tunahan Sisman](#)

[Yousef Omar](#)

[Merrill Davis](#)

[Tom comrie](#)

[Rohan Sandhu](#)

[Cameron Pounder](#)

[Daniel Redshaw](#)

Introduction

The requirements were elicited and negotiated using the product brief given to the team by the customer, which were reinforced by a meeting with the customer where further questions were raised to clarify the customer's requirements. In the meeting, the customer first set out the main requirements and then in the second half questions were asked that clarified elements of the product brief and to gather any additional requirements not stated. Additional requirements were elicited via an updated brief from the customer and additional questions posed informally during the development of the product.

Each requirement was put into 3 categories - user requirements (UR), functional requirements (FR) and non-functional requirements (NF). Each of these serves a different purpose in specifying what the game should achieve, how it should function and the quality attributes it should have. Research into these requirements has informed the importance of each requirement, ensuring a comprehensive coverage of the games featured and characteristics. Ian Sommerville's 'Software engineering' book was referred to when writing our requirements.

User requirements - This outlined the fundamental expectations from the perspective of the user. We looked at what the target audience for the game was, focusing on playability, enjoyment, appearance, accessibility, interactions and many more. These requirements came from looking at the product brief and researching our target audience. They serve as guide principles for the overall design and development process. This ensures the game would meet their expectations to give them a good game experience making sure it is enjoyable.

Functional requirements - We looked into what the game must do, in terms of the specific behaviours and functions the game should have. There were also a number of game mechanics such as energy bars, character interactions and map displays. For each requirement, it was assigned user requirements which made it easier to understand the impact each functional requirement had on the overall games. By referring to the product brief, it was ensured that the criteria was met when creating the requirements. These requirements were elicited from user feedback and customer meetings.

Non-functional requirements - We looked at the quality attributes that the game should have. These requirements ensure the game is not only functional but also enjoyable to our target audience. We wanted to make sure the game was user-friendly, looked nice and was enjoyable to play. When these non-functional requirements were added, a functional requirement was grouped alongside it, then assigned to a user requirement. From there, a fit criteria was added for each NF requirement. This ensures that each requirement could be measurable.

The elicitation and negotiation of these requirements involved meetings with potential customers which helped to prioritise the features based on what the potential users deemed to be important. Additionally, this facilitated effective communication and collaboration among the development team, which allows them to make informed decisions throughout the agile lifecycle. The presentation of these requirements reflects a comprehensive understanding to make the game engaging, enjoyable, functional and accessible to be able to meet the target audience for the game. By presenting it this way, it gave us a clear understanding and vision for the developers within this project and showed us the expectations we need to meet.

User Requirements

ID	Description	Importance		Key
UR_Access	The game needs to be accessible to play			Must
UR_Activity	The game has 3 activity types - Eating(between 1-3), Recreation(between 3-6) and Studying (between 1-2)			Should
UR_Appearance	The game will look appealing to play			Could
UR_Easy_Play	UR_Easy_Play The game must be easily playable			
UR_Enjoy	The game must be enjoyable			
UR_Interact	The user must be able to interact with buildings			
UR_Map	The game must have a map			
UR_Movement	The user must be able to move around			
UR_Resting	The user must rest at the end of the day to move to the next day			
UR_Scoring	The game should have a scoring system			
UR_Time	The game will last 5-10 mins			
UR_User	The game is a single-player game			
UR_Win	The game must be winnable			
UR_Multi_OS	The game shall operate seamlessly across multiple operating systems, including Windows, Linux, and MacOS.			
UR_Leaderboard	The game should have a leaderboard accessible from the main menu			
UR_Streaks	The game should allow players to achieve streaks by interacting with specific locations multiple times			
UR_New_Areas	The player can explore new areas like west campus and town			

Functional Requirements

ID	Description	User Requirements
FR_Difficulty	The system must have a reasonable level of difficulty	UR_Access
FR_Simplicity	The game must be simple and easy to understand	UR_Access
FR_Background_Display	The game writing should contrast with the background	UR_Access
FR_Interaction	The system shall have a simple/basic user interaction system	UR_Access
FR_Controls	The game will display the controls to the user visually	UR_Access
FR_Energy_Amount	The amount of energy depletion will depend on the activity type	UR_Activity
FR_Building_Activities	Each building can only have one activity type associated with it	UR_Activity
FR_Buildings	There must be 1-3 food locations, 3-6 recreational locations and 1-2 study locations	UR_Activity
FR_Study	The character must study at least once a day	UR_Activity
FR_Energy_Bar	Energy will be depleted by each activity	UR_Activity
FR_Scalability	The game display needs to be scalable	UR_Apperance
FR_Energy_Display	The game should display the energy bar	UR_Apperance
FR_In_Game_Time	The time (in-game) must be displayed	UR_Apperance
FR_Tutorial	The game will have a tutorial	UR_Easy_Play
FR_Menu_Screen	The game may have a menu screen (eg. tutorial/settings and play)	UR_Easy_Play
FR_Music	The game must have music	UR_Enjoy
FR_Interact	The user will use a key for interaction with buildings	UR_Interact
FR_Icon	The user will see an icon when it can interact with a building	UR_Interact
FR_Map	The game map must be of campus east	UR_Map

FR_Map_Locations	The map must contain places for study, food, activities	UR_Map
FR_Time_Display	The game should display the current day	UR_Map
FR_Movement	The user will use wasd keys for movement	UR_Movement
FR_Sprite	The user has an avatar that it controls	UR_Movement
FR_Time_Sleep	Sleep transitions the user to the next day	UR_Resting
FR_Sleep	The character must sleep at the end of each day	UR_Resting
FR_Score_Calc	The games score is calculated from the users interactions	UR_Scoring
FR_Study_Score	Score is increased by studying	UR_Scoring
FR_Recreation_Score	Score is increased by doing a recreational activity	UR_Scoring
FR_Overstudy	Score is decreased by over studying	UR_Scoring
FR_Forget_to_Eat	Score is decreased by forgetting to eat	UR_Scoring
FR_No_Recreation	Score is decreased by not doing any recreational activity	UR_Scoring
FR_Timing	The game will have a timing system that will ensure it finishes in around 5-10 mins	UR_Time
FR_Smooth_Time	Time passes smoothly	UR_Time
FR_Time_Drain	Time passively drains	UR_Time
FR_Time_Cut	Time drains in cuts when a user interacts with a building	UR_Time
FR_End_Message	A message is displayed at the end to tell the user if they have won	UR_Win
FR_Score_Display	The score is displayed at end	UR_Win
FR_Game_Duration_and_Compatibility	The game session lasts between 5-10 minutes, providing a quick and enjoyable experience, compatible with Windows, Linux, and MacOS.	UR_Time, UR_Multi_OS
FR_Leaderboard	The game has a leaderboard that stores the top 10 scores, accessible from the main menu	UR_Leaderboard
FR_Leaderboard_Input	Player inputs name and adds score to leaderboard at the end of the game	UR_Leaderboard
FR_Streaks	The player can achieve streaks by interacting with specific locations multiple times (Football pitch, Library, Nightclub)	UR_Streaks
FR_Streak_Achievement	Streaks should show up as achievements at the	UR_Streaks

s	end of the game score screen, each increasing score by 10%	
FR_New_Areas	The player can go to west campus and town by walking west from the starting map	UR_New_Areas
FR_Map_Location_Display	The game will display the current map location statically	UR_New_Areas
FR_Interaction_Points	The game will display interaction points with floating icons	UR_Interact

Non Functional Requirements

ID	Description	User requirements	Fit criteria
NF_Availability	The system should always be available to be played	UR_Access	Once the game is downloaded it is stored locally and doesn't require any internet to run
NF_Colour	The system may be suitable for disabilities eg. colour blindness	UR_Access	Tested an image of the game to see how it would look for different types of colour blindness
NF_Simplicity	The game must be simple and easy to understand	UR_Access	The game must be simple and easy to understand
NF_Background_Display	The game writing should contrast with the background	UR_Access	The game writing should contrast with the background
NF_Graphics	The graphics should be clear/distinguishable	UR_Appearance	The font used is clear and all writing is of a readable size, should be easy to read
NF_Reliability	The system should reliably run	UR_Easy_Play	Testability is made on different computers and shouldn't crash

NF_Music	The game could have background music	UR_Enjoy	Background music will play continuously without interruption for the duration of the game.
NF_SFX	The game may have SFX	UR_Enjoy	Sound effects will trigger correctly 100% of the time during relevant game actions.
NF_Display	The display will be top-down	UR_Map	The whole map is visible on the screen
NF_Difficulty	The game will be difficult to score highly	UR_Skill	The highest possible score requires a perfect run-through
NF_Lose	The game must be possible to lose	UR_Skill	If the user triggers a loss condition then they lose
NF_Game_Time	The game should last 7 days (in-game time)	UR_Time	The day count is shown and lasts 7 in-game days
NF_Win	The game must be easily winnable	UR_Win	There is a very low base requirement to win
